

## Color Theory 101

Write the following color schemes and their definitions in your sketchbook.

**Primary colors** – (Red, Yellow, Blue), These colors cannot be created by mixing other colors. When mixed together, these colors create *all* other colors.

**Secondary colors** – (Orange, Green, Violet), These are a result from mixing the primary colors.

**Intermediate/ Tertiary colors** - Colors that are made by mixing a primary color with a secondary color. *For example: Yellow-Green is a tertiary color because Yellow-Green is a result from mixing together Yellow (Primary) and Green (Secondary).*

**Warm colors** – (Red, Orange, Yellow), These colors remind us of warm things such as fire or the sun.

**Cool colors** – (Green, Blue, Violet), These colors remind us of cold things such as winter or water.

**Complimentary colors** – Colors that are directly across from one another on the color wheel. *For example: Violet and Yellow are complimentary colors.*

**Analogous colors** – Any 3 colors that are side by side on the color wheel. *For example: Red-Orange, Orange and Yellow-Orange would be considered analogous colors.*
